Introduction

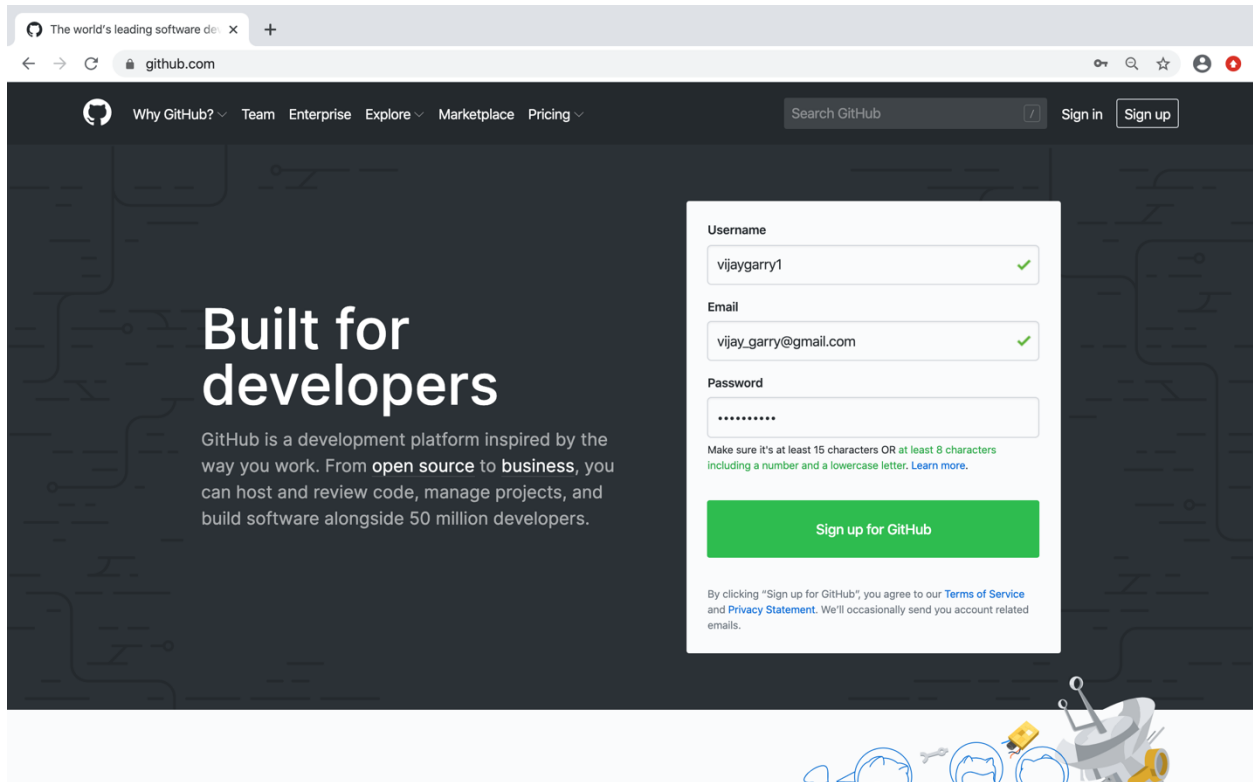

We are planning to use github for source code repository. This document includes steps on how to setup github account and git client (SourceTree)

Signup at GitHub

Goto GitHub at <https://github.com/>

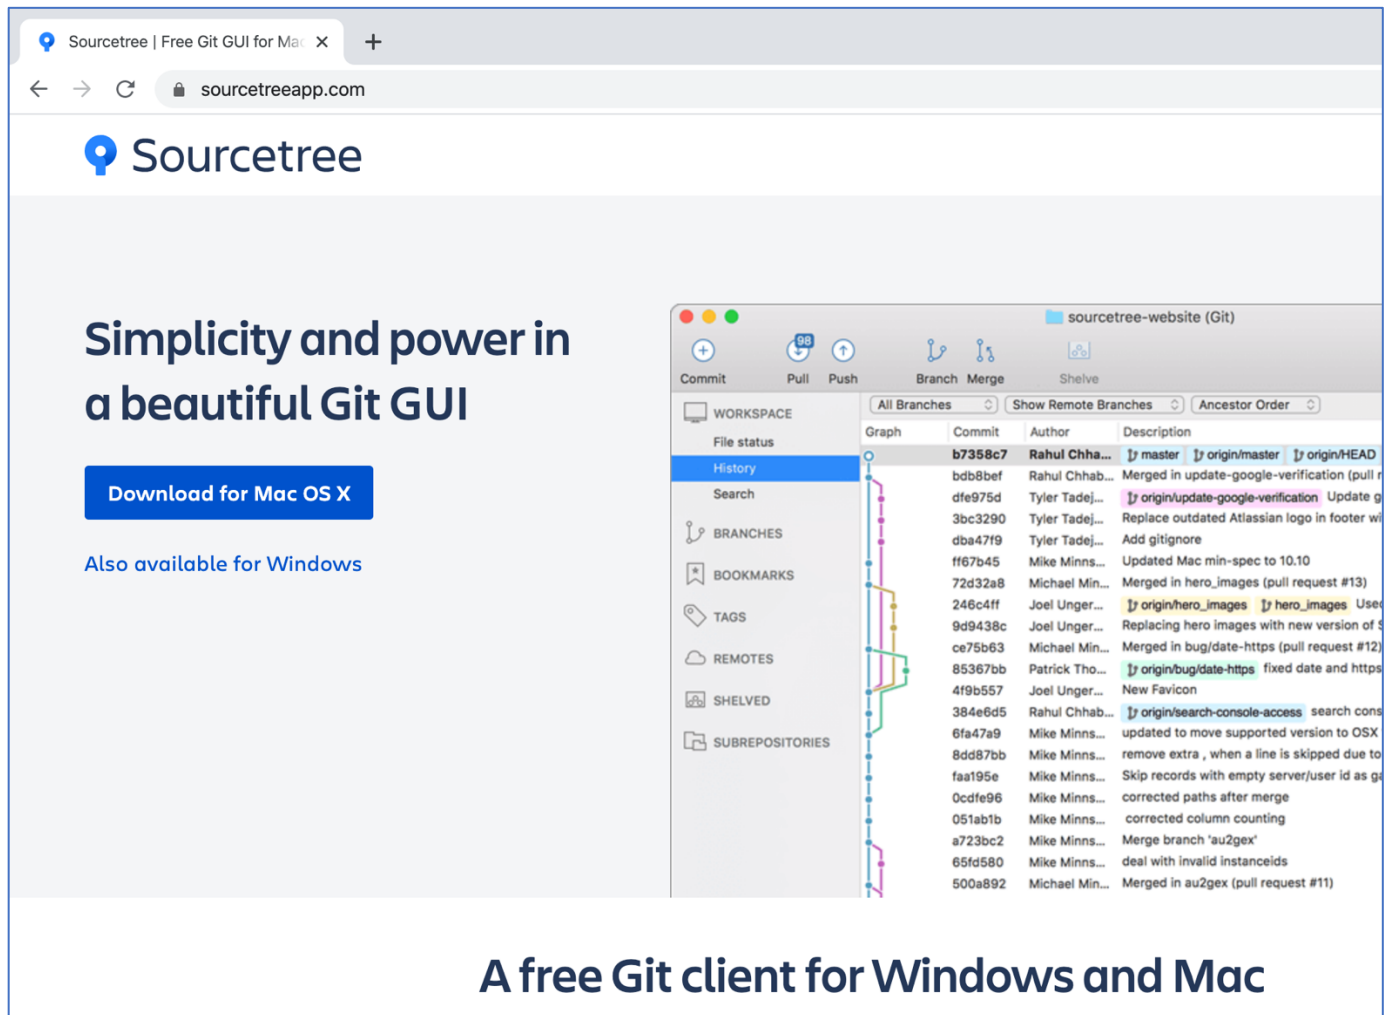

Select Unique Username and Enter Email Id, Password. Sample information:

Download SourceTree

Go to <https://www.sourcetreeapp.com/>

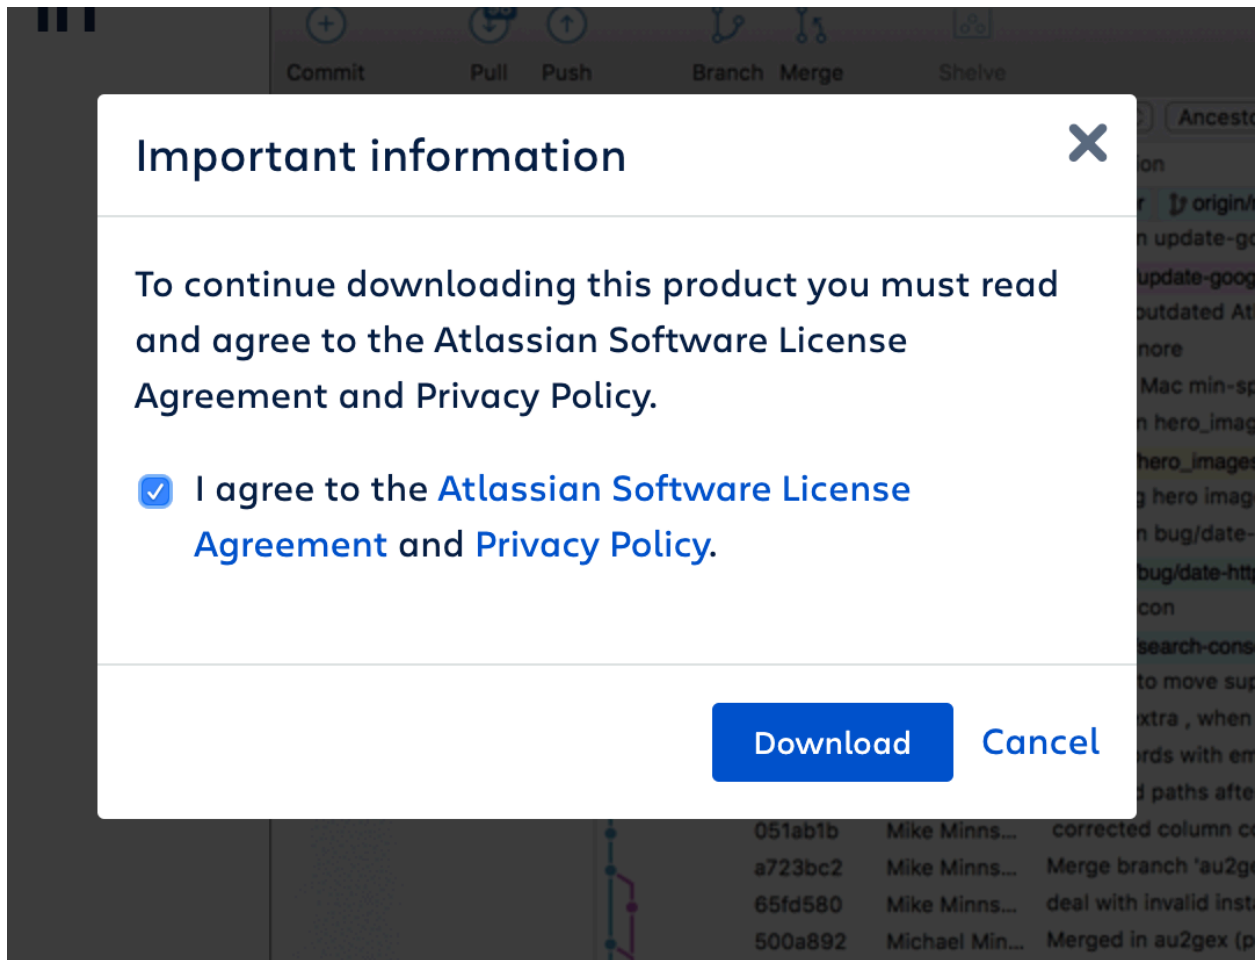

The screenshot shows the SourceTree website on a web browser. The website has a clean, modern design with the SourceTree logo at the top. Below the logo, the text "Simplicity and power in a beautiful Git GUI" is displayed. A prominent blue button labeled "Download for Mac OS X" is visible, along with a link that says "Also available for Windows".

To the right of the website content, there is a preview of the SourceTree application interface. The application window shows a sidebar with a tree view containing "WORKSPACE", "File status", "History", "Search", "BRANCHES", "BOOKMARKS", "TAGS", "REMOTES", "SHELVED", and "SUBREPOSITORIES". The main area displays a commit history table with columns for "Graph", "Commit", "Author", and "Description". The table lists several commits, including the most recent one by Rahul Chhabra with commit hash b7358c7, which is the master branch. Other commits include updates to Google verification, Atlassian logo, gitignore, and various bug fixes.

A free Git client for Windows and Mac

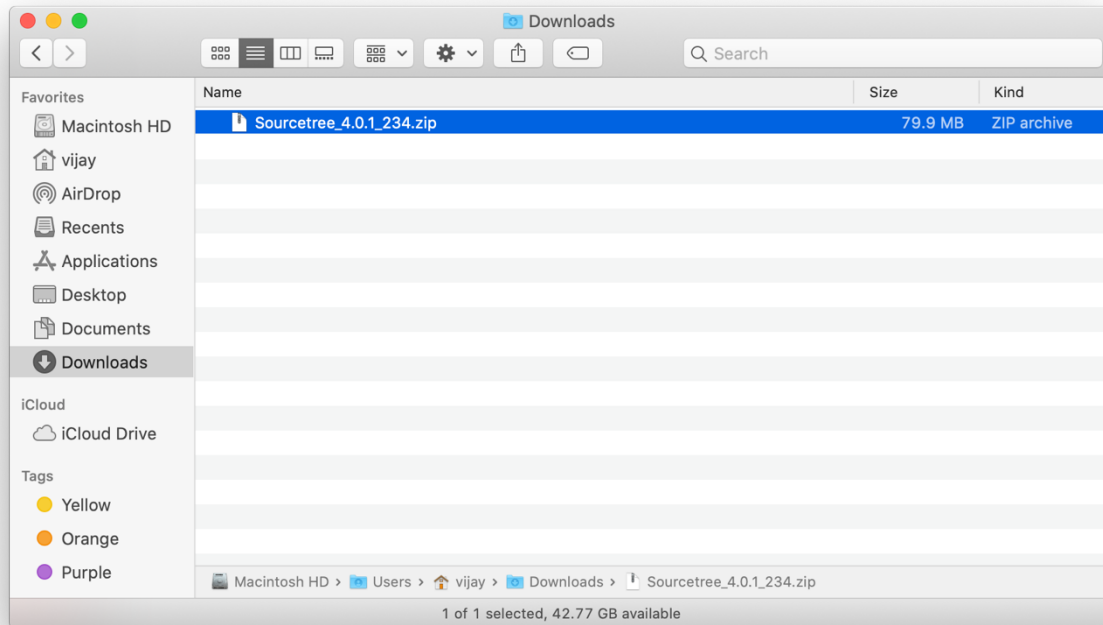

Download sourcetree app by clicking “Download for Mac OS X”

Accept Agreement and click “Download” to start download.

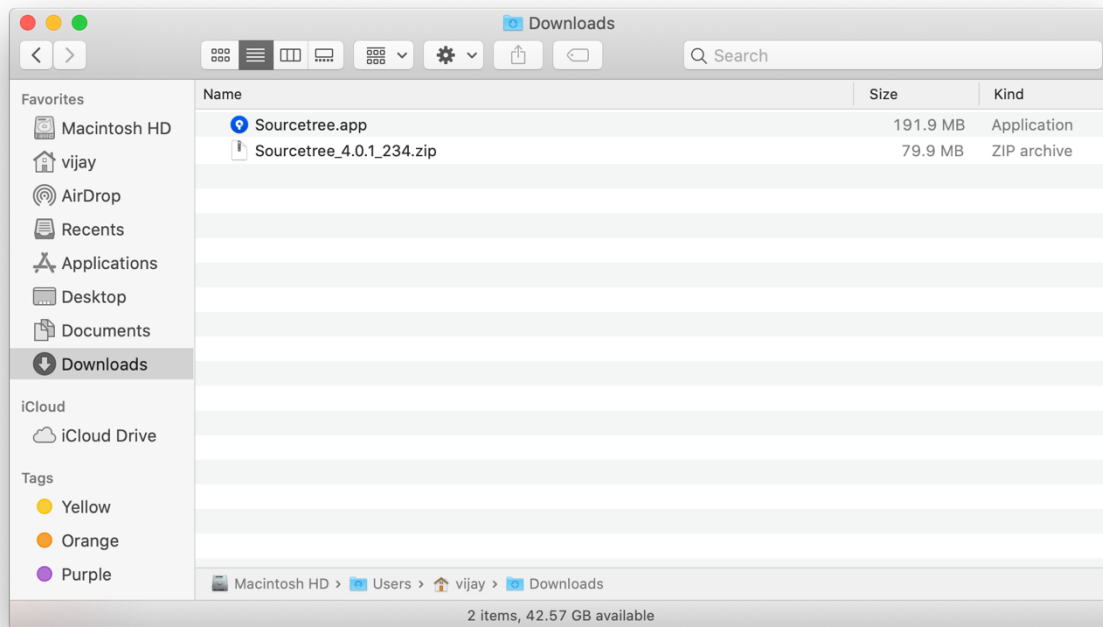

GIT SETUP

Most probably this file will be downloaded in “Downloads” folder. Downloaded folder looks like below:

Extract the zip file by double clicking zip file. Sourcetree.app file looks as below after unzip.

GIT SETUP

Move the sourcetree.app file in application folder for easy access.

For the first time, right click on Sourcetree.app and click on open.
